

How Much Would it be Worth to Increase Your Personnel's Productivity While Improving their Healthcare Options? Now There's a Way

Just 20 minutes with the HealthLight™ Light Therapy System provides the user with an energizing experience. Since the system is also FDA cleared for temporary relief of pain, inflammation and improved circulation, during each session your staff will also be dealing with many of the symptoms that effect their productivity and quality of life. Over 40% of doctors visits are related to pain and/or inflammation.

The system is so easy to use that your staff will run it themselves. Simply setup a quiet room where one unit is available for each 12 to 15 staff members. You can have one person coordinate the schedule or have a sign-up sheet located just outside the door of the room. Allowing 30 minute slots provides ample time for the staff member to enter, connect the unit, enjoy the automatic 20-minute session, then leave the room prior to the next scheduled appointment.

Despite the ease of operation, your staff will be experiencing one of the most advanced Light Therapy systems now available. During their session they will be receiving over 17,000 milliwatts of energy from the special array of 500 high powered LEDs.

Call today for your complimentary demonstration of the HealthLight™ Light Therapy System at your convenience. It will be an experience like no other.
